

Class: 6B (6)

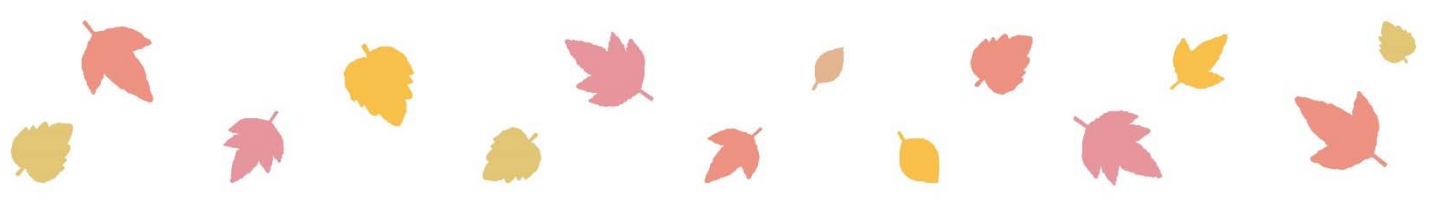

Name: Gurung Aarna

My Dream Job

I want to be an engineer when I grow up because I think it's an important and meaningful job. If I become an engineer, I'll plan and design products to improve our life. For example, a robotic arm for people with disabilities. If I become an engineer, I'll work in an office and make different kinds of robots and inventions.

A good engineer should possess a lot of qualities. First, they need to be smart because they need to use a lot of mathematical and scientific skills to solve different technical problems. They also have to be hard-working and patient because it takes a long

time to conduct research and develop new products. They also need to stay up-to-date with computer programming and learn how to code accurately.

I think that I am suitable to be an engineer because I am smart and hard-working. I am good at Maths and I am willing to put my heart and soul into inventing groundbreaking products. I am also deeply interested in coding and robotic technology.

I hope one day I can be an engineer. This is my dream and I will try my best to make it come true.
